

ENVIRONMENTAL POLICY

February, 2026

Escubedo Turkey Management considers environmental management as a fundamental concern of the company's behavior and has defined this environmental policy with the following commitments.

- To comply with government legislation enforced and other specified conditions in all our activities.
- To comply with government legislations for water quality, consumption and management of drinking water.
- To meet the minimum legal requirements for responsible chemical management.
- To aim to reduce noise emissions and pollution.
- To meet the legal requirements for working comfort and air quality (ambient temperature, ventilation and humidity).
- To take care to protect the specific property and land rights (land use) of individuals or indigenous people and their water resources.
- To work to reduce carbon emissions, greenhouse gas emissions and natural resource consumption, in order to increase the amount of recycled waste for sustainable resource management (Decarbonization).
- To avoid sourcing materials from deforested areas, to produce products from sustainable sources, to preserve our soil quality and to contribute to biodiversity.
- To prevent any environmental pollution originating from our organization's activities by using the best available techniques and technology, taking into account the life cycle approach.
- To minimize environmental impact by protecting the environment closest to the factory's location and to be in communication with relevant parties affected by our environmental performance.
- To implement policies to reduce the consumption of materials with high environmental impact in our processes.
- To use energy resources responsibly by strictly adhering to renewable energy consumption and to increase knowledge of energy efficiency studies.
- To encourage the responsible consumption of water and energy in the organization as well as the separation of waste.
- To implement good practices in the use of consumables in offices.
- To contribute to our environmental management by continuously improving the effectiveness of the environmental management system with performance indicators and reviews in order to achieve sustainable and environmentally friendly social and economic growth.
- To increase the awareness of our employees on environmental management through the training activities we organize and to convey to this to our suppliers.
- Regarding the importance, monitoring and track of climate change; To raise the awareness of our senior management, employees and all other stakeholders, to comply with mandatory or voluntary obligations in this regard and to ensure its continuity.

This Environmental Policy is of strategic importance to the company, and all members are required to know and comply with it.”

Kerem Üzüm
CEO
